# BIOSECURITY SOLUTIONS ARE IN OUR DNA

**LANXESS**   
**BIOSECURITY  
SOLUTIONS**  
Shaping the Future of Biosecurity

In 2021, LANXESS and THESEO (Biolink, Ewabo), two major global forces in the research, development, manufacture and supply of premium livestock, poultry and aquaculture biosecurity products and services, merged to create LANXESS Biosecurity Solutions.

The DNA of LANXESS Biosecurity Solutions is built on a portfolio of scientifically formulated, highly effective and versatile products. Our premium product brands include Virkon® S, TH4+, TH5®, Biosolve®, Mentofin®, Hepabial®, Aldecol DES®, Aldecoc® CMK, Mefisto® Shock and many more.

With over 70 years combined technical expertise, a comprehensive offering of alternative disinfectant active chemistries and an extensive portfolio of cleaning, disinfection, insecticide and animal welfare products, it's no wonder that LANXESS Biosecurity Solutions is helping to shape the future of biosecurity.

## Dear VIV Visitors,

Welcome back at VIV's home ground in Utrecht, the Netherlands! Several years past since the last VIV Europe. It makes you wonder has the world changed? With the difficult Covid-19 pandemic finally under considerable control one easily tends to answer: "Everything has changed..." For sure we are much more aware of our own vulnerability as well as that of the planet.

As such, innovations related towards local food production, farmer product concepts and shorter supply chains have been further developed at an accelerated pace.

Exhibitors from all over the world contribute to this development and show their individual solutions for circular & sustainable production. In the midst of all these exhibits we have hall 9 as our field of inspiration. In this unique hall all individual elements are brought together as one innovative Agri-Food story. The initiator of this inspiring setting is our motivating partner HubOrange!

### VIV Europe 2022 is all about Global Inspiration | Local Practice.

To highlight the Feed sector we are pleased to have VICTAM International again next to VIV Europe. In this powerful co-location all elements of Feed Milling Technology and Feed Ingredients & Additives are conveniently presented under the Jaarbeurs roof.

Definitely the last 2 years many companies have worked on technical facilities to be at least digitally in contact with customers. VIV is no exception and we are delighted to launch our VIV Connect Event App during the show. Join us and stay connected with the VIV worldwide Community 24/7. After months of zoom sessions everybody is eager to explore the world and MEET LIVE again. Fortunately NOT everything has changed.

Enjoy the show! Warm regards,  
**RENATE WIENDELS**, Senior Project Manager

## General Overview | VIV Europe Halls 7-12

### OPENING HOURS:

10:00 - 18:00 hours

For networking activities, the halls will be open a couple of extra hours in the evening.

### DISTANCES:

**Utrecht Central Station:**

2 minutes walk

**Historic City Centre:**

5 minutes walk

**Amsterdam:**

30 minutes by train

For more information please have a look at the last page inside (FAQ).

**VIV EUROPE:**  
**HALLS: 7, 8, 9, 10, 11, 12**

**VICTAM INTERNATIONAL:**

**HALLS: 1, 2**

(Your badge gives free access to both events)

**HALL 7** **HATCHING, PROCESSING & HANDLING/ FOOD ENGINEERING**

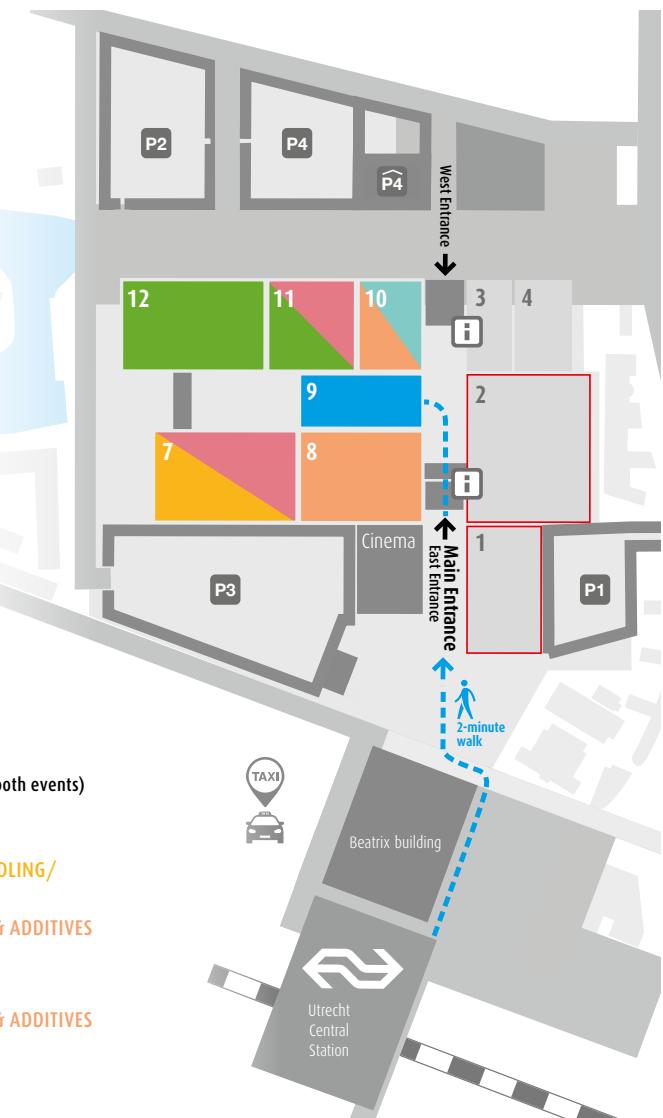

**HALL 8** **FEED INGREDIENTS & ADDITIVES**

**HALL 9** **INSPIRATION HALL**

**HALL 10** **ANIMAL HEALTH, FEED INGREDIENTS & ADDITIVES**

**HALL 11** **FARM PRODUCTION, BREEDING**

**HALL 12** **FARM PRODUCTION**

# TRAVEL TIPS

While you are in the Netherlands for business, take the chance to combine it with leisure. Here are some ideas to make the most of your stay in the country.

## TIVOLIVREDENBURG Utrecht Enjoy music with perfect acoustics

If you are a music lover, TivoliVredenburg is the place for you. The large, modern music palace has five rooms with perfect acoustics for symphonic music, pop music, jazz, chamber music and dance. An exceptional building in Europe. 10-minute walk from VIV Europe venue.

## SHOWGUIDE

VIV EUROPE 2022  
UTRECHT, THE NETHERLANDS  
31 MAY-2 JUNE

## AMSTERDAM CANAL CRUISE Jump on a Boat

It is considered a sin to not take the canal cruise in Amsterdam. One of the most fascinating ways to behold the beauty of around 165 canals spread across the city and at the same time witness the famous attractions while sailing through. Choose either a Classic River Boat or an Open Boat.

## RIJKSMUSEUM AMSTERDAM Dutch arts and history

The Rijksmuseum is the national museum of the Netherlands dedicated to Dutch arts and history. It houses the Dutch masterpieces such as Like The Milkmaid by Vermeer, Self-portrait by Van Gogh, The Merry Family by Jan Steen and Rembrandt's Night Watch to name a few.

## AMSTERDAM WINDMILL TOURS Holland countryside pleasure

Away from the hustle and bustle of the city, you may enjoy a trip to three peaceful villages - wandering among the windmills in Zaanse Schans, learning how cheese is made at the Cheese Factory in Volendam and explore how wooden shoes are realized in Marken.

## HALF-DAY AT FLORIADE 2022 Additional feast for our visitors

The Floriade Expo 2022 takes place once every 10 years and 2022 is the year. Almere, considered the newest city in the Netherlands, is hosting the event just 30 minutes from Amsterdam. A journey of Dutch Horticulture and city innovators. Open every day from 10am to 7pm.

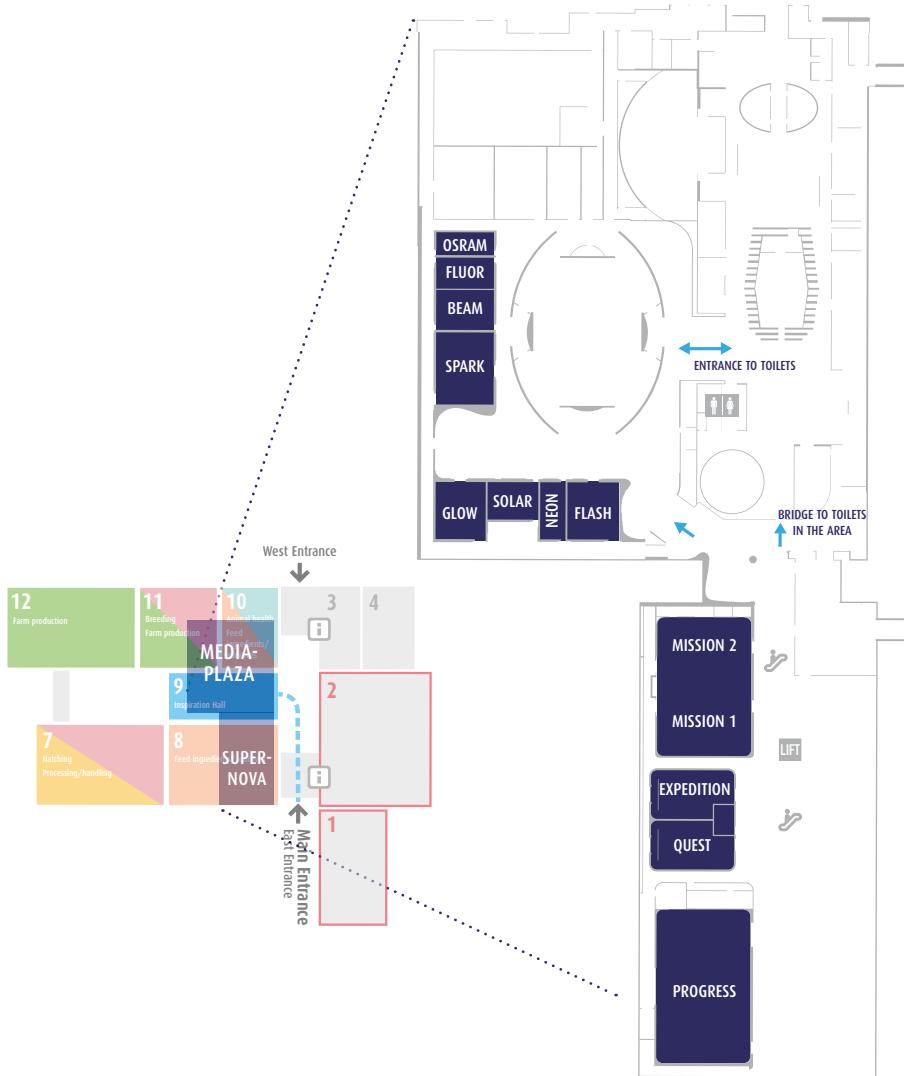

---

**Travel assistance**   **Amsterdam:** [webcare@iamsterdam.com](mailto:webcare@iamsterdam.com). Mon-Fri between 9am-5pm (CET)

13:00 - 13:30 **Welcome coffee/tea**

13:30 - 16:00 **Program to be confirmed**

# VIV EUROPE 2022 CONFERENCE & SEMINAR PROGRAM

## Room Polar

**Health & Nutrition**, by Poultry World

**POULTRY WORLD**

12:30 - 14:00

Central theme of Poultry Worlds hybrid seminar during VIV Europe will be how we can achieve healthier poultry through a balanced gut health and supplying the bird with all the necessary nutrients it requires. Learn from our experts how to cope with, or even anticipate on health challenges, how to choose the right ingredients and additives and last but not least how to get the best performing flock with the least of worries. The hybrid seminar will highlight the interactions feeding strategies have on the gastro intestinal tract and hence the overall health of the bird.

## Room Flash

**Hatchery Seminar**, by Roodbont Publishers

Moderator: Annemarie Weijland, Roodbont Publishers B.V.

**ROODBONT**

13:30 - 15:30

**The challenge of sharing knowledge in hatchery**,  
by Dr. Sander Lourens, Hatchbility.com, Hatchery consultant, lecturer at Aeres University of Applied Sciences and main author of Hatchery Signals

**How to count on your people and products in hatchery**,  
by Keith Bramwell, Jamesway Chick Master Incubator Inc.

**The hatching egg is more than half of your success**,  
by Rik Koopman, MSD Animal Health

**Welcome and Intro,** by Roger Gilbert, Perendale Publishers Ltd

**Smart Process Storage,** by Koen Verbrugge, SCE, Belgium

**Get a Grip on Grinding,** by Harold Schroijen, Van Aarsen, the Netherlands

**Flexibility in Dosing and Weighing,** by Richard Biessen, KSE, Belgium

**Liquids & Powders: Their use in the feed process,** by Marcos Prati, PLP, Italy

**Conditioning,** by Arthur vom Hofe, CPM, Europe

**Moisture Control and Measurement: Throughout the milling process,**  
by Neal Cass, Hydronix, UK

**Pelleting,** by Arthur vom Hofe, CPM, Europe

**Smart Feed Factories,** by Kim Jensen Møller, Famsun, China

**14:50 - 15:00 Panel Discussion and Q&A**

**15:00 - 15:10 Closing,** by Roger Gilbert, Perendale Publishers Ltd

## Prevent infection at a young age with the VIR-check

The innovative VIR-check, developed by Royal GD, is the best test for assessing the effectiveness of broiler house cleaning and disinfection. This test determines the viral pressure in a broiler house. Based on 10 swabs from 6-7 day old chicks, a quantitative multiplex PCR test assesses how many common resistant intestinal viruses the chicks picked up in the first days of life.

The VIR-check score is easy to interpret with four colour coded categories (green, yellow, orange and red). This tool shows the result of farm hygiene and disinfection and it also stimulates to continuously improve this process. Research shows that chicks with a lower VIR-check score grow faster. If a farm improves from category red to category green, this will result in more than 100 grams of extra growth per chick in 6 weeks!

The VIR-check is also an important part of GD's disease control programmes. These programmes help farmers to control, reduce and in some cases even eradicate and receive accreditation for specific diseases.

### VIR-check:

- Tests for five common resistant intestinal viruses
- Evaluates the effectiveness of cleaning and disinfection
- Easy sampling and clear results
- Low VIR-check score = better growth

Learn more at our booth 10.D030 or visit [www.vir-check.com](http://www.vir-check.com)

## Innovations VIV Europe 2022 – Ziggity Systems, Inc.

### Broiler Breeder Watering Concept:

Featuring Dedicated Male and Female Drinker Lines with Gender Specific Big Z Drinkers

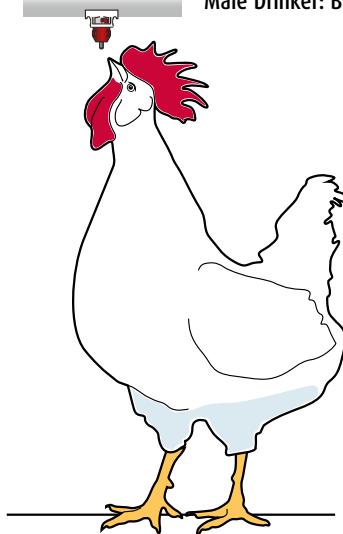

Ziggity's Big Z Broiler Breeder watering system addresses the height difference between male and female broiler breeders. Because male broiler breeders are much taller than their female counterparts, their separate and dedicated drinker lines are positioned much higher off the floor while the female dedicated lines are positioned much lower. This gender dedicated setup means that both males and females can efficiently obtain all the hygienic water they need as their dedicated drinkers are positioned at the correct height for HEADS-UP DRINKING™ that minimizes or eliminates spillage. And that means less ammonia release, better bird welfare and a more productive environment.

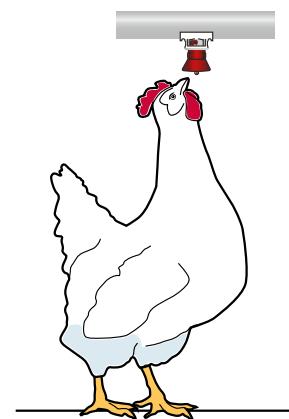

### Production Benefits:

- Improved Male Uniformity
- Reduction in male mortality
- Less male spiking required
- Increased hatching eggs per hen housed
- Increased hatchability for more chicks per hen housed
- Fewer floor eggs in scratch area
- Improved bird welfare ► Booth 12.E018

Male Drinker: Big Z

Female Drinker: Big Z Shielded

## NATUREDYNAMICS – It's not just light, it's science.

NatureDynamics is lighting that is so flexible and controllable, you can fine-tune it to create the optimal conditions and maximize health for your livestock's through-out the day. As the first poultry lighting system that's wirelessly controlled, NatureDynamics letting you deploy effective lighting recipes at the touch of an app. Easy to use and completely hassle-free, you can fine-tune it to create the optimal conditions and maximize health for your broilers through-out the day. It also allows for zone lighting control - making lighting adjustable in single areas for easier day-to-day activity.

With NatureDynamics, it's possible to change the spectrum and intensity throughout the day and throughout the production cycle - with our dedicated light recipes. These recipes enable you to use light as a tool to synchronize the hormonal activities and biological patterns you desire in your animals, creating physiological and biological results that optimize your farm and improve your yield. The result: improved welfare and increased production.

## Following the very successful EggsCargoSystem®

Following the very successful EggsCargoSystem® for chicken eggs, GI OVO has now developed the EggsCargoSystem XL. This system is especially designed for the transport of duck and turkey eggs.

It consists of a tray which is designed for 20 eggs that offers maximum comfort and protection to the eggs. Besides it contains a pallet with the dimensions 120x90 cm. These pallets are exactly matched to 12 stacks of trays per row. Finally, the system consists of a divider. This divider makes the use of empty trays on top of the stacks unnecessary.

The stacks of eggs can also be slid over the divider instead of having to be placed on the top. That makes the work much lighter and faster. The system can be build up to 5 rows containing 7,200 eggs

**GI-OVO®**  
EGG HANDLING INNOVATIONS

per pallet. The entire system can also be picked up and unpacked with robots. All parts of the EggsCargoSystem XL are made of durable plastic with an anti-aging additive.

GI OVO can supply the system in almost all RAL colors and provided with customer-specific inscriptions. All this for indication to the user. The EggsCargoSystem XL is the perfect solution for the damage-free transport of duck and turkey eggs. ► Booth 12.C074

## SmartSense™

A major breakthrough in developing the hatchery of the future

Imagine a future in which connected, autonomous incubators effortlessly hatch the highest number of best-quality chicks. Royal Pas Reform brings that scenario a significant step closer with SmartSense™ adaptive embryonic incubation – a new series of fully connected, data-driven incubators that reliably ‘sense’ the changing needs of the growing embryo.

Besides using pre-determined incubation programs for day-old chicks, SmartSense™ also evaluates and meets the current requirements of the embryo in each specific incubator section. We call this ‘Adaptive Embryonic Incubation™’ (AEI™).

SmartSense's™ industry leading, precise climate control – based on air temperature, relative humidity and CO<sub>2</sub> – now has a next generation series of intelligent, high-accuracy sensors in the SmartSense™

trolley. These constantly and non-invasively measure temperature, together with trolley weight loss and heart rate averages (both available soon). The result is that the incubator can automatically adapt the environmental conditions to the actual needs of the growing embryos, further optimizing uniformity and maximizing post-hatch performance.

The full SmartSense™ incubation series comprises the SmartSense™ setter and SmartSense™ hatcher, combined with the SmartSense™ trolley, SmartSense™ interface and SmartCenterPro™ hatchery management system.

For more information visit ► Booth 07.D074-75

## SmartVac™

Next generation of in-ovo vaccination & nutrition

Royal Pas Reform has announced the launch of its latest innovation in early nutrition and animal welfare-friendly production practices.

A new, patented technology, SmartVac™ allows 100% safe, consistent and accurate in-ovo vaccination and nutrition. It delivers the injectables only into the amniotic fluid, thus preventing possible injury to the growing embryo.

SmartVac™ will enable the poultry industry to apply a wide range of vaccines in-ovo, including Gumboro, Marek, ND and Coccidiosis vaccines. This is optionally performed in combination with nutritional components – for chickens with a healthy gut, favourable microbiota, enhanced immunity, and thus improved field performance.

SmartVac™ is designed to maximise the safety of the injection process, by focusing on the development level and needs of the growing embryo. The Embryo Soft Touch® EST® sensor on the injector allows automatic and individual adaptation of the injection depth to each single embryo, regardless of egg and embryo size.

EST® also detects when the setter tray has an empty egg position, or contains non-viable eggs (infertiles or early deads), helping to reduce wastage of valuable vaccine. Only eggs containing grown embryos are inoculated with vaccine or nutrition.

For more information visit ► Booth 07.D074-75  
[www.pasreform.com/smartzvac](http://www.pasreform.com/smartzvac)

Royal Pas Reform has developed an advanced technological solution to deliver safe and effective in-ovo vaccination and nutrition: SmartVac™

## CollaPhos, the natural phosphate source

The growth of the bones of broiler chickens is important for their well-being. Due to recent changes in the European legislation an organic source of calcium and phosphorus became again available. Next to effects on well-being, it also fits seamlessly in the current need to have a circular poultry production.

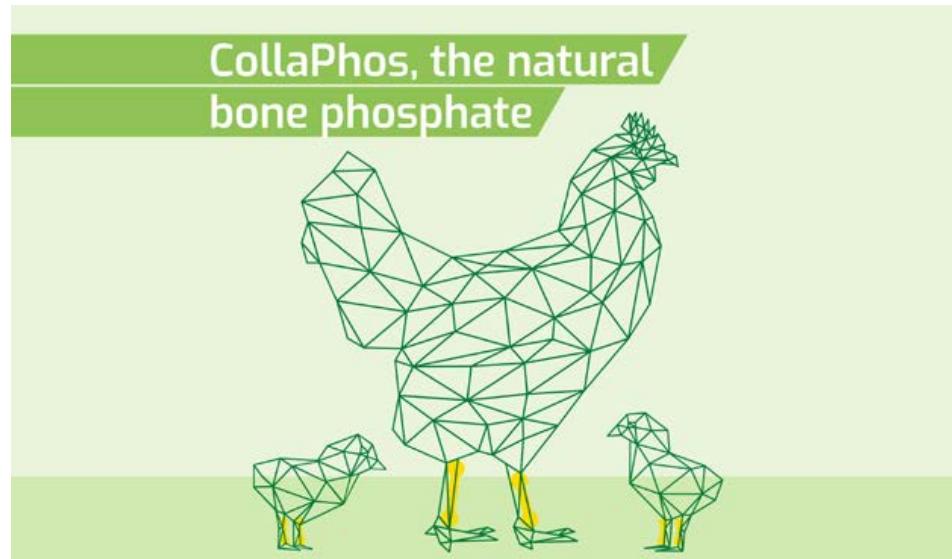

CollaPhos is a phosphorus source from organic origin which originates from carefully sourced animal bones out of which both collagen and CollaPhos are produced. CollaPhos has a high level of available and digestible phosphorus and calcium, which are present in the optimal ratio.

In this hydroxyapatite crystal, which is the naturally occurring mineral form, calcium and phosphorus are still embedded in the collagen matrix which supports

# sonac

their biological value. This makes CollaPhos very suitable to help to prevent and restore suboptimal bone health in young broilers. Tibia strength and thickness significantly improved in a broiler study. Further minerals (macro and trace) from organic origin resulted in offspring from slower-growing broiler breeder in improved body weight and tibia characteristics.\*

\* Bahadir Can Güz ; PhD Thesis "Healthy Bones for Broiler Chickens" 326 pages; Wageningen University, Wageningen, The Netherlands (2022) ► Booth 08.E075

## Hotraco Agri presents iHotraco Farm Data

# Hotraco Agri

iHotraco Farm Data collects and organizes all farm data automatically, reliably and securely, using the latest data sharing technology. It provides a complete data set that is centrally stored in a standardized format, easily retrieved for management dashboards. iHotraco Farm Data enables farmers to monitor and share their data efficiently. It works with any third-party dashboard, providing the complete and reliable data set needed to safely draw conclusions. Allowing farmers to make their farms more efficient and profitable.

By collecting data automatically, the system also eliminates the need for manual entry of livestock charts or CSV exports. The reliability and completeness of iHotraco ensure that data is stored even

without internet. The system encrypts all data before it is uploaded and stored according to the highest security standards. This allows farmers to securely share data with other parties. But only if they want to, as farmers always remain in control of their own data.

In the coming years, smart farming will grow exponentially. iHotraco Farm Data is created to collect data in the exact way this revolution calls for and helps farmers take their next steps to the future of farming. ► Booth 12.C100

## DIETAXION

In a context of constant increase of feed raw materials prices, DIETAXION offers feed ingredients that optimize feed digestibility.

PIDOLin PCa® (pure calcium pidolate) helps the transport of calcium and supports the bone structure. Recent studies showed that it is possible, thanks to PIDOLin PCa®, to strongly reduce the levels of phosphorus and calcium in broilers diets (up to -20%) without negatively impacting growth performances or bone structure (Spain 2020; Argentina 2020; France 2021).

BUTYLIN 54® is a double buffered sodium butyrate. Its non-coated form enables a release of butyric acid from the first parts of the gut, supporting endogenous enzymatic secretions, the development of intestinal absorption sites and preserving the digestive integrity of poultry. Feed digestibility is

improved, leading to better performances in broilers (France 2013; Thailand 2016; Indonesia 2016, Argentina 2019) and layers (France 2013). DIETAXION has developed a matrix of formulation for BUTYLIN 54®, opening a new approach with savings on energy and protein in broilers feeds (Argentina 2020).

In this context of high feed raw material prices, PIDOLin PCa® and BUTYLIN 54® enables to save on phosphorus, energy and protein in broilers diets.

**NEW Fortrol® cost-effective Salmonella control**

**NEW Fortrol® cost-effective Salmonella control significantly improves feed and feed ingredient values. It's the latest innovation from pathogen control specialist Anitox, feed safety and productivity partner to the world's leading feed and food producers for more than 45 years.**

Fortrol® is applied to feed materials and compound feeds to reduce the risk of harmful microbes and to prevent recontamination immediately post-heat treatment.

Fortrol® can be used both as preventive or corrective action, as well as a flush treatment to reduce risk of pathogen colonization in ingredient processing plants and feed mills.

Where accelerated pathogen kill and lifetime re-contamination protection are critical to profitability and food chain security, Anitox pathogen control programs offer the flexibility to switch between Fortrol® and the patented high performance feed sanitizer, Finio®. Contact your Anitox Clean Feed Expert to discuss which solution maximises your return on investment.

Fortrol® Benefits

- Highly effective control of performance-limiting and food safety pathogens including *Salmonella*
  - Application range from 2-8 kg/MT, offering flexibility in the face of variable risk
  - Improved feed microbial quality for healthy productive gut microflora
  - Simple, multi-point application
  - Facilitates improved moisture management, milling efficiency & shelf-life extension

Visit [www.anitox.com/fortrol](http://www.anitox.com/fortrol)  
for more information. ► Booth 11.C002

# MS AviCleaner

We all know that a thorough cleaning of the poultry housing in between rounds is essential to reduce pathogen pressure on the new flock and prevent cross contamination. Cleaning the drinking and feeding lines is one of the essential tasks to optimise hygiene before a new round, but also one of the most physically demanding.

Manually cleaning the drinking & feeding pans with a pressure washer is a physically demanding task that is also very time consuming. Moreover, the pans have lots of corners where dirt can gather, these are hard to reach and can be difficult to clean perfectly. It's not strange then that employees aren't standing in line to carry out this job.

The MS AviCleaner changes this completely. The system fully automates the pressure cleaning of drinking & feeding lines.

The MS Avicleaner pressure washes the lines perfectly from every angle, is easy to operate and it is FAST.

- Cleans from every angle
  - Saves time, much faster than manual cleaning
  - Easy & fun to operate
  - Relieves employees of manual labour
  - Guaranteed clean result

Heavy duty cleaning in poultry farms is now the easiest task in cleaning between rounds.

Experience it LIVE at booth 10.C030.

## Best hygiene products in livestock farming

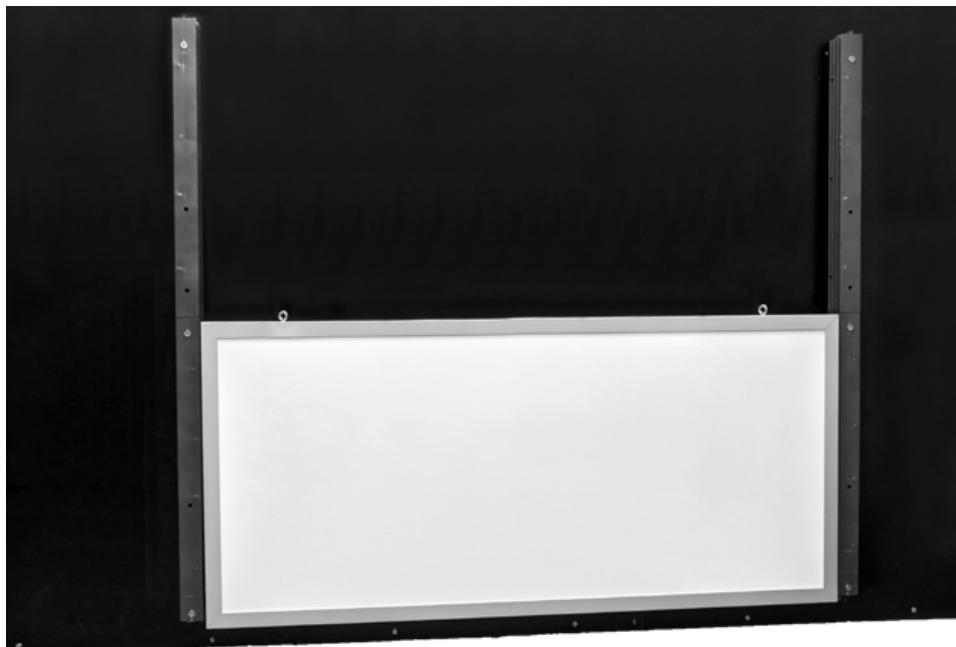

## Tulderhof presents new Superior pop-hole door

Free range chickens benefit from a good pop hole so that the climate in the poultry house remains optimal. A barn with a free range has a risk of draft holes and as a poultry farmer you want to prevent this. That is why Tulderhof has produced a new high-quality pop hole door: the Superior pop hole door.

For an extra high insulation value, we make a pop hole door with a slide of 32 mm thick sandwich PS panel. Around this pop hole door there is an

aluminum profile in which a rubber seal is mounted for a draft-free seal. Great advantage is the very high insulation value and the pop hole doors have a fire class B. Can be mounted on the outside of the house (in the wintergarden). ► Booth 12.C100

## Plasson Automatic Flushing

Plasson has designed an integral solenoid in its Line Head units that enables easy flushing. The flushing is programmed and managed through a controller or an App on your smart phone. Over the past two years, 15,000 regulators with automatic flushing solenoids have been installed.

### System Advantages:

- Flushing is programmed and managed using an App on your smart phone
- Economical solution requiring no wiring and minimal set-up
- Automated pre-planned flushing schedule
- System programming is done by a free and easy-to-use App (English, Portuguese, or Spanish)
- Bluetooth operated
- Maintenance free
- up to 5 different flushing programs
- Flushing according to temperature or time
- Flushing up to 6 times per day. ► Booth 12.A078

**Plasson Auto Flushing is available in two configurations:**

### Wired auto flushing system

Solenoids are wired to a controller – either the main house one or Plasson dedicated flushing controller.

## Meggsius Connect: powering precision poultry farming

Meggsius Connect, a cloud based software platform, retrieves relevant data from all Meggsius devices and presents them in a user-friendly dashboard. Unique feature is that it has been developed to support the primary function of the Meggsius products, in such a way that it generates information that we haven't seen before.

An example: the distribution of eggs produced in the house, giving an exact overview how many eggs came from where and what location in the house. Giving also a first impression on bird distribution, uniformity of climate conditions, bird behaviour, technical issues and anything else affecting the distribution of eggs. Combining this with data regarding egg quality, generated by the Meggsius Select, will unlock even more valuable and never

seen before insights on which egg with which characteristics came from where in the house.

In the future we will also be able to connect other Vencomatic Group products. Our goal is to connect to any device. These first steps will pave the way towards more data driven decisions and step by step bring the development of data based predictive algorithms to support our customers closer, as well as our vision of an autonomous poultry house.

► Booth 11.C064

## "SAVE THE RESOURCES" STRATEGY DURING VIV EUROPE

Saving resources has always been an important goal in poultry production to increase output in egg- or meat production. It decreases resources such as feed, energy and manpower. With the latest geo-political situation, this has become extra important.

During VIV Europe the new **Salmet Salprogress+** system is introduced. An important, innovative tool for poultry producers to save their resources by:

- forecasting the behaviour and performance of animals
- forecasting the situation of the equipment
- proper registering of all conditions and equipment in the house: climate conditions, animal conditions, energy control, management input

The result for the poultry producer is to have excellent tools to:

- improve the output of the operation
  - reduce the input of resources, mainly: feed, energy, manpower
  - reduce maintenance and predict downtime risks
- Salprogress+ is a customized combination of hardware, software and skilled poultry trainers. It helps customers to further improve the ROI and is available for any kind or brand of poultry equipment.

Ask for a demonstration, booth 12.A010.

# INNOVATIONS

## Celtimin 2-5: enhance your poultry performance sustainably

Whether your flock consists of broilers, breeders, layers or even a different species of poultry, calcium is essential for a good performance. We can provide you with a highly soluble, sustainable and scientifically proven Ca source which improve performance. Celtimin 2-5 is a calcareous marine algae which is sustainably harvested near the coasts of Iceland.

While the fine version has been proven to enhance growth and bone strength in broilers, we now introduce a coarse product especially for the use in mash diets to provide a more slow-release Ca source with a higher solubility as regular limestone. Celtimin 2-5 improves laying percentage,

reduces downgraded eggs, lowers mortality and prolongates the laying cycle. In older hens it was shown that it improves the eggshell quality while maintaining laying percentage so the hens can be kept in production for a longer period. There are also indications that keel bone fractures can be reduced with the use of Celtimin 2-5 which has a high occurrence in the laying sector. You will not only increase animal performance but also the financial results.

For custom advise or more information please contact Jadis Additiva: [info@jadis-additiva.com](mailto:info@jadis-additiva.com), or +31 10 2467054. ▶ Booth 08.D015

**pluck&play solutions.**

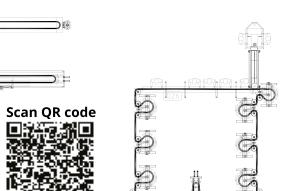

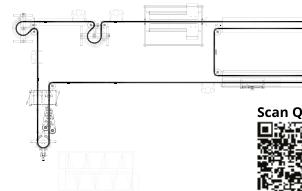

Poultry processing machines & full line solutions

ARRIVAL | KILLING AND PLUCKING | EVISCERATION | CHILLING | WEIGHING | CUT-UP | FILLETING & DEBONING | PACKING

## Poultry Processing Lines

500 up to 6000 birds per hour semi- and fully automatic

**100% pre-fab, pre-wired, and stand alone  
Installation without any specialists!!!!**

**500 -1000 bph  
3-5 staff**

**2000 - 4000 bph  
5-9 staff**

### Key Benefits

- ✓ Easy to install
- ✓ Easy to operate
- ✓ Easy to clean
- ✓ Easy to maintain
- ✓ Easy to understand
- ✓ And easy to buy 😊

**KEEP UP ON TRENDS AND CHALLENGES** of poultry industry with **ZOOTECNICA INTERNATIONAL**

It's been 50 years since Zootecnica International started serving the poultry industry and professionals. Today the magazine is edited in three languages (English, Italian and Russian) and delivered monthly in 120 countries, reaching around 30.000 readers all over the world.

The target of Zootecnica International includes farmers, egg producers, breeding companies, hatcheries, feed mills, poultry and egg processing companies.

Magazine and website offer a broad overview on the poultry industry, providing in-depth news on international markets, business management, trends and practices in poultry, genetics, incubation, nutrition, veterinary and management.

</

# FAQ

## What are the opening hours?

VIV Europe opens every day at **10:00** and officially closes at **18:00**. For networking activities, the halls will be open a couple of extra hours in the evening.

## Are there facilities for disabled visitors?

We have a number of wheelchairs available. These can be found in the lobby at the East Entrance and in the Beatrixgebouw. If you wish to borrow a wheelchair, go to the EHBO (First Aid) office, which can be found at the entrance of Hall 9. It is not possible to reserve a wheelchair in advance. For other facilities, please also see the floor plan in this show guide.

## Where can I store my jacket & bag?

There are cloakrooms available near entrance East & West, with a small fee.

## Where can I get food & drinks?

There are several restaurants on the show floor, as well as near the Jaarbeurs, such as Speys & Zeyn.

## What about WIFI?

Jaarbeurs has a general guest WIFI network to which you can logon free of charge. In addition VIV arranged a dedicated VIV WIFI in hall 9. User name: VIV Europe 2022 | Password: viveurope

## How do I get to the city centre?

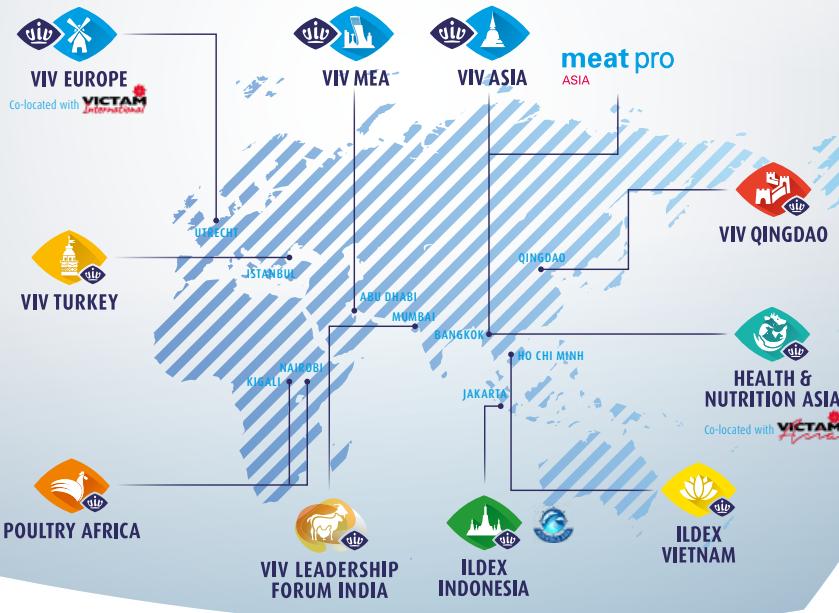

The historic city centre of Utrecht is within walking distance of Jaarbeurs. When you exit entrance East, cross the road towards the train station. Pass by the station and shopping mall Hoogh Catharijne marks the start of the city centre. Amsterdam is just 30 minutes by train from Utrecht Central Station.
